

Fast, flexible and fully integrated - individual business processes in SAP Customer Checkout

With plug-ins for SAP Customer Checkout, you get extensions that are fully integrated into your checkout solution.

With these enhancements, you can map individual business processes that help you achieve greater flexibility and make your customers even more satisfied.

Below is a selection of examples of what you can achieve with UNIORG's CCO plug-ins.

- FC Ingolstadt 04
- SV Sandhausen 1916
- SV Babelsberg 03
- Karlsruher SC
- Iserlohn Roosters

... are only a small excerpt of customers who trust in SAP solutions with UNIORG.

Pick-Up Number

double numbered receipt

Offer your customers the possibility of pre-ordering e.g. drinks for breaks. Unique pick-up numbers are printed on the customer receipt and on the order document. Waiting times in queues will be reduced and your staff will be able to work even more efficiently.

Table Plan

graphical table opening

Allow your staff to quickly assign tables via touch to a graphical table plan and reduce unnecessary errors caused by, for example, transposed numbers when entering the table number.

Cashless Plug-Ins

cashless payments

Let your customers pay directly and cashless via SumUp, Payment-sense (UK) or GiroGo with the help of the smallest devices that fit in every pocket, for example.

Second Screen

individual 2nd screen

Display individual positions listed in detail for your customers, or keep your customers up to date with live broadcasts, e.g. from the pitch. You now have the possibility to design your second screen individually for your customers.

ET-Ticketscan

recognize members

Record your customers in seconds by scanning the day ticket or season ticket directly at the cash desk. Furthermore you can grant your members a discount at the cash desk by scanning the season ticket.

You cannot implement your individual requirements so far and are looking for a solution? Then let us talk to you and find the best way for you.
